Average of rating by reviews_count
Average of rating
reviews_count
Most apps with very few reviews have highly variable ratings; some near 3, others as low as 0–2. As reviews_count increases, ratings converge tightly toward 4.5–5, with almost no low-rated apps once they cross a few thousand reviews.
This suggests that apps with a small number of reviews are more volatile, while apps with a large review base have "proven" themselves over time. Poor apps likely get abandoned or removed before accumulating that many reviews, leaving only strong performers in the high-review-count range.
